Introduction

Interchangeability is said to be the most important factor in trading. It needs efforts to make it consistent. As the crypto sphere is getting inclusive and ubiquitous. So, it is important to keep the transactions quite easy. Also, in order to achieve the heights, we need to bring liquidity.

Nuevo Token is determined as the platform which would resolve the issue providing the perfect solution. It will provide a solution which will bind a number of quantitative solutions. By providing you with better outcomes on various fronts, it too leverages the various token protocols.

Hence, the ultimate goal of **Nuevo token** is to achieve utmost interchangeability and liquidity at the global level. It needs to ensure the free flow of assets and crypto at the global level. Here, the purpose of the white paper is to present the **Nuevo token** to the potential and real investors among the network operators. The information being provided in the document will not imply any elements of any contractual relationship.

The whole and sole purpose of this white paper is to provide reasonable and relevant information to the potential coin holders who desire to purchase or want to know better about the **Nuevo Token**. Also, the document can have changes and can be altered at any time for corrections and updates.

Also, the price of the **Nuevo token** or its market value can have fluctuations based on the material risks or uncertainties in the crypto market.

What is Cryptocurrency?

A cryptocurrency is said to be as a virtual or a digital currency which is secured by the cryptography. It is just a digital currency which is thus an alternative form of the payment being created having the use of encryption algorithms. This digital currency is designed in order to work as a medium of exchange via the computer network which is not reliant on any of the central authority like bank or government for upholding or maintaining it. It is just the defining feature of cryptocurrencies.

What is Blockchain?

Block chain could be much more complicated. And it is! But its concept is quite simple. Blockchain is just a kind of database. In order to know more about blockchain, one needed to know about databases.

Hence, a database is just the collection of certain information which is stored economically in the computer system. Any data, any information or database structured typically in a sort of table format. As a result, it allows easy search and filter for any specific information.

The designing of spreadsheets is done for some specific person or any small group of people. It is done to access or store a limited amount of information. In contrast, the database is designed to have a larger amount of information which can be accessed, manipulated and filtered easily and much quickly by any specific number of users at a particular time.

What is a Token?

When used the term crypto token, it is referred to as a special virtual currency token or the way in which the cryptocurrencies are denominated. These tokens undergo the representation of tradable and fungible utilities or assets which are present in their own blockchain. Very often, the crypto tokens are used for fundraising the crowd sales. These can be also used as a substitute for various other things. These tokens are distributed, created, sold and also circulated through the various standards initiating the process of coin offering.

What is a Crypto Wallet?

A crypto wallet is determined to be an app which allows the cryptocurrency users to store and retrieve their digital assets. With the conventional currency, you are not required to spend your cash. But it also helps to keep that at a particular place. This wallet contains a public key which is called the wallet address and also the private keys needed to sign the transactions of cryptocurrency. Wallets, which are also known as the hardware wallets are termed to be the most secure way of storing the cryptocurrency keys. Like think that to be the USB sticks which are used for storing the digital assets. Cold wallets are not connected to the internet. Hence, these are not vulnerable to hackers.

Our Vision

Nuevo token desires to set up a sort of risk free environment for every crypto enthusiast in the world. It has the involvement of a number of protocols which will help you a lot in bringing a sort of proper balance in the distribution of the funds. Also, it helps in the process of planning and execution of the right kind of token mechanisms which would limit all the parameters.

In order to prevent manipulative practices, certain limits are set by the user which will enable the setup with both public as well as private keys. It makes risk management more open-ended and helps you in utilizing the whole structure. Also, it gives you more merits and keeps the system safe in return of investments.

It also minimizes the expenses and generates income that gives way to the expansion of fintech systems. The consistency of income along with risk grading gets better and more effective as well. By using this open-ended structure, it becomes possible for every business entity to manage assets. It does not only bring more liquidity, but also mitigates the risk levels to enthuse more people to invest. Moreover, it smartly manages and gives you liberty of bringing more efficacy.

Besides giving so many advantages to users, the Vintage mechanism will bring proactive liquidity solutions too. It will pave the way for more certainty and lets you have a vast source of information. This is also a very simple method that lets you generate more soluble ground. With the help of this program, not only the risks are lowered, but many problems get resolved. The proactive sources of automation give you better means of handling the transaction. It paves way for more certainty and lets you have a better output too. The trusted channels get utilized easily and it helps in giving more liquidity.

Our Mission

With crypto markets developing it is highly probable that asset and strategy allocation will begin to converge with traditional. Nuevo Token platform stands to benefit from this influx of capital and its user-friendly design will appease both crypto natives as well as users completely new to decentralization. As the token economy expands and becomes more diverse, participants will want products that can provide them with diversified exposure to these different sectors. Sector specific indices will become the schelling point for benchmarking performance. Our index creation tools allow the portfolio of indices to grow with the market, easily supporting new sectors as they are defined.

However, token economies are unlike their traditional counterparts in the sense that token holders take a more active role in the decision making process. In line with this ideology, Nuevo will support active participation in the governance of the tokens it custodies. Additionally, we will minimize opportunity cost by leveraging off-platform yield optimisers.

Also, Nuevo token aims at starting the sale of coins at Rs 1 and then bringing it to \$1.

What is Neuvo Token?

Enter the world of cryptocurrency with Nuevo token. Nuevo token majorly deals in accepting donations in crypto. Here, one is at the most exemplary and nifty system of crypto trading ever devised. Nuevo works in accepting crypto donations and then providing funds to trusts, foundations and organizations which are linked to it.

The token is just building a new digital economy. It is majorly working for foundations and organizations which are linked to it in order to develop next generation protocols for the connected world. It aims at starting the coin sale at 1 Rs price and taking it to 1\$.

Utility of Nuevo Token

We are a new digital registry being formed for adding unique identifiers to crypto tokens. We offer funds to foundations and trusts which they accept in the form of donations in form of Crypto. Our tokens can be also used in Meta NFT, retails shops, online purchasing, etc.

Future Projects of Nuevo Token

NFT'S

A Non-fungible token is a unit of data stored on a digital ledger, called a blockchain, that certifies a digital asset to be unique and therefore not interchangeable. An integration of NFT technology is the future of Nuevo Token. NFTs are valued as per their uniqueness, akin to a collector item.

Start-ups

In this technology world, Nuevo would be a collaborator for startups, supporting them like a backbone to stand on their feet from their seed stage. Nuevo will do this by helping the foundations and trusts by providing them with the funds gained from crypto in the form of donations.

Staking

Staking is the process of delegating or locking up crypto holdings to earn rewards. Some of the rewards you can earn from staking are earning additional tokens and getting some voting rights.

Needs / Existing Problems

Because of the prevailing number of problems, most people avoid trading. Many of them are listed as below:

Lack of time to learn/to trade

- Job commitment
- Educational commitment
- Business commitment
- Personal Commitments
- Family Commitment

Lack of Awareness

- Liquidity
- Profitability
- Tools, Technologies & Platforms
- Trading options

Myths / Misconceptions

- You can only make money by investing a lot of money
- Trading is like a gambling exclusively for the experts
- This is not a cup of tea.

Lack of Funds

- Small businesses not able to get sufficient profits 22% People Leaving below the poverty line in India Natural disasters - floods, droughts, pandemics Lack of fund Management.
- Limited Salaries

Also a number of new traders are losing money because of the following reasons:

Lack of Experience and Skills

- IT skills
- Numerical skills
- Patience and discipline
- Mental toughness
- Analytical Skills (Fundamental & Technical)

Emotional Trading

- Fear
- Greed
- Ego

Solutions of the same are given as below:

- A unique portal
- Containing services & advanced tools
- Traders i.e. Neuvo

What is Copy Trading?

Copy trading is said to be as the method or the concept which permits you to directly copy the positions being taken by other expert traders.

The same are in

- Forex
- Crypto Currency
- NSE/MCX/BSE

Advantages of Copy trading are discussed as below:

- It's very helpful to the new traders and start ups.
- It limits potential losses
- It's a passive investment strategy
- You can manage risk more effectively
- It also upskill your own trading knowledge
- You will get free time for your other activities
- It removes the emotions from the trading decision process which is much important.

Automatic Copy Trading for the Stock Market Trading

Copy trading refers to a portfolio management strategy in which one can copy the trades of another trader and thus keep track of the performance of the investor. The automated version of copy trading has revolutionized the trading activities that are conducted in the stock market. It enables a trader to automatically perform trading transactions instead of executing his own trades manually. The integration of automatic copy trading platforms in the stock market automates the process of transferring stocks or securities, in exchange for money, between the seller and the buyer.

Automatic Copy Trading Platforms Simplifies The Stock Market Trading

The technical functionalities of automatic copy trading platforms are designed to enable traders to participate not just in copying of trade positions of other traders but to also learn, connect and share about stock market trading. A diverse range of high-end technologies allows users to chat with traders, discuss suitable strategic approaches and benefit from their knowledge and experience in the stock market. The performance of effective copy trading terminals is shaped by the combination of gamification as well as social elements that offer a transparent trading landscape to stock market traders. In Nuevo automatic copy trading platform, crowd generated data acts as the backbone, which enables the traders to stay informed and make better strategic decisions while trading in the stock market.

What is BOT Trading?

Bot trading is described as Automated Trading having the use of artificial intelligence Software programmes like BOT and ROBOT.

- Forex
- NSE / MCX / BSE
- Crypto Currency

Advantages of BOT Trading :

- It is very helpful; to the new traders.
- It limits the chances of potential losses.
- It is determined as a passive investment strategy.
- You can also get time for your other activities.
- Can have the management of risk more effectively.
- Emotionless trading
- Bots work 24*7

Technical Architecture of BOT Trading Platforms

BOT trading platform needs to have the incorporation of a diverse range of technical components and features so that it can have seamless and efficient functioning. One of the chief elements is the inverters account section. It is one of the most important technical components of the infrastructure as it provides an insight into varying areas such as multi-currency wallets, statistical insights as well as an overview of the portfolio. Another integral component that makes up the architecture is the marketplace of trading models. It is the specific section of a BOT trading platform where each cryptocurrency investor can look for strategies and compare them in a detailed manner. It acts as a cardinal component of a BOT trading platform which allows traders and investors to choose the most appropriate trading models that they wish to start following in the future.

The 'traders dashboard' is another vital segment of the architecture of a BOT trading platform. It acts as an important section that allows traders functioning in the cryptocurrency market setting to create a trading model. It can also enable cryptocurrency traders to keep track of the market performance by day, month, as well as year. Since this section of the architecture gives an exhaustive insight into the trading statistics, it needs to be backed by robust network connectivity. This dashboard fundamentally represents the in-depth trading history and enables traders to export a diverse range of reports based on their trading needs.

Selection of Right Kind of Trading Algorithms

Algorithms are determined as the instructions which are created for carrying out a computation or solving any specific problems.

When it comes to BOT trading platforms that are used for cryptocurrency trading, the selection of the right kind of training algorithms is considered to be indispensable. In fact, the objective must be to design liquidity aggregation or algorithmic components so that it would be possible to aggregate liquidity from top cryptocurrency exchanges. The integration of the algorithm that facilitates liquidity aggregation in the cryptocurrency trading domain can help traders in diverse ways. It can simplify activities such as market making and deal matching. It can also support traders in the cryptocurrency market by providing a diverse range of opportunities in the form of algorithmic trading strategic options.

Technology that supports the generation of cryptocurrency prices

Integration of a functional Application Programming Interface In any trading landscape, the price is considered to be a very important factor that influences the strategic decisions of traders. The infrastructure of a BOT trading platform for cryptocurrency trading must integrate a generator of cryptocurrency prices. This feature can improve the efficiency of the trading platform because it can enable the validation of mathematical hypotheses based on statistical strategies. Such a generator has the capability to clone a diverse range of evolutions as well as volatilities that exist in the dynamic market setting. It can support the testing of specific statistical hypotheses on a large number of curves with the help of statistically credible combinations. This technical component can further help to check the overall performance of strategies in different kinds of market scenarios.

Functional Application Programming Integration

The work of the BOT trading platform is to streamline and function the cryptocurrency trading activities. These majorly depend on the Application Programming Interface which is used in the trading platform ecosystem.

The efficiency of the API can have a direct implication on the algorithmic trading strategies that are available for traders in the dynamic market landscape. In a BOT trading platform, an API serves as a common denominator. This is because it can concentrate data that is linked in real-time and simplify the buy and sell function of BOT trading platforms by providing both outputs and inputs to data relating to price histories.

It is essential that the API should be backed by varied other elements like that of smart technologies and contracts. It is to enable the automation of the digital assets in the trading process. It also affects the nature of the investment by making it more efficient and transparent.

Comprehensive Infrastructure Capabilities

As both investors as well as traders function on the BOT trading platforms for cryptocurrency trading, the solid interconnectivity between each of the infrastructural components is integral. The role of analytical techniques and professional tools in the ecosystem has the capability to strengthen the effectiveness and robustness of the trading platform. An integration of a crypto intelligence portal can boost the infrastructural capabilities as it can serve as an integrated tool that gives access to educational resources as well as knowledge base that can be utilized by online traders. The technical components that have been integrated into a BOT trading platform can boost the capabilities of the trading platform's infrastructure by combining a diverse range of features such as the latest cryptocurrency market news, authentic and unique content created by the leading experts in the cryptocurrency community and the latest developments in the market. The technical attributes of a BOT trading platform ensure that certain functions are carried out in the back-end of the system. The signal generator component of the infrastructure is responsible for doing the work of a trader, making forecasts, and recognizing possible cryptocurrency traders based upon the market data as well as the technical analytical indicators. The risk allocation is another important function that relies on the infrastructural capabilities of a BOT trading platform. The BOT is responsible for distributing risk based on particular set of rules and parameters that have been set by the trader. Ultimately, the execution activity is carried out on the BOT trading platform, based on the automated feature. The use of high-end technologies in the BOT trading platform supports the conversion of market signals into API key requests. This transition that takes place ensures that the cryptocurrency exchange process is easily understood by the traders in the dynamic market setting. The technologies and tools that make up a BOT trading platform shape the efficiency of the cryptocurrency trading activity for traders.

Efficient & Robust Automation

Due to the high popularity of cryptocurrency trading, the number of traders that function in the market domain has been expanding like never before. Thus there is the need for the BOT trading platforms for cryptocurrency trading to be backed by powerful and easy-to-use automation. The integration of User Experience (UX) design in the BOT trading platform is considered to be of high relevance. UX along with the automation feature, can enhance the simplicity, functionality and overall efficiency of the trading platform. The adoption of automation can ensure that there exist specialized as well as complimentary crypto space activities. These technical elements ensure that both experienced and novice traders get an integrated and qualitative cryptocurrency trading experience. The use of suitable technical elements in the trading platform can ensure that the movements in the market are captured automatically and on a real-time basis. In order to upgrade the degree of automation and efficiency of the BOT trading platform, it is vital for designers to have in place pre-established parameters. These parameters can facilitate the running of suitable trading algorithms that can help traders to automatically sell, buy or hold assets in an efficient and automated manner.

Integrating the Blockchain technology into BOT trading platforms

In the recent time phase, Blockchain is determined to be the most promising technological concept. This technology could be also fused with the BOT trading platforms for the purpose of stock market trading. This technology is much useful for the facilitation of the streamlined operation of the payment system.

This technology can be fused with BOT trading platforms for stock market trading. The technology is considered to be very useful as it can facilitate the streamlined operation of the payment system. If a BOT trading platform utilizes blockchain technology, the safety of the stock market trading activity can get magnified. This is possible as no interruptions from third parties could affect the trading richness or strategic decisions of the traders. The efficiency of blockchain technology can get further intensified when it is backed by innovative strategic tools such as hedging tools, and risk management tools. The introduction of these tools in BOT trading platforms for stock market trading is valuable as they help in managing complex positions, mitigate risk, execute appropriate and unique strategies.

Solid Network Trading Model

A proper and well managed network is determined as the core and most important requirement of the BOT trading platform. It is only the aspect on which the BOT trading platform for the stock trading is based.

Since computers are able to instantly respond to the changing market conditions, they need to be backed by good network connectivity. It can boost the degree of automation of BOT trading platforms and ensure that the generation of orders is possible as soon as the exact trade criteria are fulfilled. The establishment of a seamless network is an essential part of the technical infrastructure of the trading platform. It can support real-time communication with market exchanges so that the order placing activity by traders can be based upon present market conditions and the strategic decision of the trader. The existence of a robust networking attribute can boost the efficiency, and speed of the system and help in addressing bottlenecks like emotional trading and errors.
